

Intelligence is most powerful when it is owned.

The On-premise Sovereign AI Operating Platform for High-Trust Enterprises.

High-trust organizations face a false choice.

The Autonomy Matrix	Public Cloud AI	OmniNStack Sovereign AI
Data Location	External servers (Vulnerable)	Strictly On-Premise / Air-Gapped (Secure)
Model Choice	Total vendor lock-in	Infrastructure & Hardware Agnostic
Security Mandate	Shared responsibility model	Non-negotiable, Zero-Trust Security
Governance	Black-box processing	Immutable Identity-Aware Auditing

The central nervous system for absolute data sovereignty.

OmniNStack is the platform of last resort for data security. It provides a sanctuary where organizational autonomy is guaranteed, vendor lock-in is eliminated, and absolute privacy is enforced.

Public Internet

Absolute sovereignty by design.

Network Isolated

Engineered to function in total air-gap environments with zero connection to the public internet. Absolute privacy for your most sensitive operations.

Multi-Model Gateway

Eliminate vendor lock-in. Toggle between public APIs and some mitigated and private local LLMs instantly via a secure configuration dashboard.

Agentic Knowledge

Autonomous AI agents that act like human researchers, bridging local documents with global intelligence via secure, citation-backed RAG.

The Architecture of Autonomy.

The Five-Layer Sovereign Stack.

Engineered for the high-trust enterprise.

Gov & Public Sector

- **Operation:** Automated zoning, legislative analysis, and public record synthesis.
- **Sovereign Advantage:** Pixel-perfect citations and air-gapped security for classified data.

Healthcare Systems

- **Operation:** De-identified clinical inference and administrative automation.
- **Sovereign Advantage:** Absolute compliance—PHI never leaves the local network.

Physical AI & Industrial

- **Operation:** Cognitive layers for physical assets and edge robotics.
- **Sovereign Advantage:** Integrates real-time asset telemetry into deterministic decision loops.

The architects behind the sanctuary.

June Hong

CEO & Co-founder
Inter

- 20+ years in mission-critical systems and cyber-physical bridging.
- Architected systems for Samsung, NTT, and NEC.

Hyunseung Lee

Principal SW Engineer &
AI Scientist, Co-founder

- Master of production-grade On-premise Sovereign AI stacks.
- Specializes in LangGraph, RAG, and LangChain.

Joseph S. Yu, Ph.D.

Principal HW Engineer &
Physical AI Architect, Co-founder

- Strategic AI Architect.
- Driving cross-border tech alignment across the South Korea-North America corridor.

OmniNStack seamlessly marries infrastructure-agnostic hardware
with deterministic software governance to create the
definitive platform for absolute data sovereignty.

Secure your future. Own your intelligence.
